

## SMART BY CHOICE

Smart is often associated with adding more processing, more software, and more control layers. **PRIMA Series** challenges that assumption. The smart choice is not always the amplifier with the longest feature list, but the one that best fits the existing architecture.

Choose simplicity that works.  
**PRIMA** delivers **compact professional amplification** with dependable **performance**, practical **value**, and all the **qualities** you'd expect from a Powersoft amplifier.
